COLLECTIE 2023

ROYALGRASS®
hello happiness

ENJOY LIFE

Your free time is precious. Wouldn't you prefer to spend it on other things than mowing, and fertilising your lawn? You could be spending it with family and friends. So choose artificial grass from Royal Grass® .

SEDUCTIVELY BEAUTIFUL

Our grass is as realistic as possible. It
should look like grass.
It should feel like grass.
It should be grass.

QUALITY GUARANTEED

Since 2003 we've been manufacturing artificial grass. In that time, we've built up a reputation. With our 15 year warranty you can be rest assured you can enjoy your lawn with quality guaranteed.

THE MOST INNOVATIVE TECHNOLOGY

It is our main goal to make a perfect copy of the characteristics of natural grass; up till microscopic level. This has led to several revolutionary breakthroughs.

Royal Grass V-Shape

When you put a blade of grass under the microscope, you'll see that it has a V-shape. Royal Grass® is the only artificial grass with that same patented V-shape. Combined with the reinforced backbone, this ensures the grass blades all stand upright.

Micro Nerve Technology

Natural grass has a bit of a natural glow. We wanted our artificial grass to have that as well. Our Micro Nerve Technology (MiNT) ensures that you can hardly tell our grass from natural grass when it comes to that glow.

Realistic Directional Yarn

Natural grass can be quite capricious: every blade has its own direction. Thanks to our Realistic Directional Yarn (ReaDY) technology, we were able to give our artificial grass that same natural volatility. With ReaDY® technology artificial grass really springs to life.

MULTI-SHAPE

Multishape

A combination of the familiar ReaDY fibre with straight, delicate fibres. The various widths and textures make the grasses that feature this technology very natural and soft.

SMART

SMART

The SMART fibres have an undulating profile and soft, matt, micro nerves. This gives these natural looking fibres a beautiful appearance, yet also makes them very strong, springy and realistic.

SunTEC

SunTEC

Our SunTEC gives our blades of grass a sun-kissed look. It is for selected Royal Grass® products. Of course, not all blades are brown, just the odd blade here and there. This gives the grass a natural summery look. Your lawn isn't absolutely perfect, which actually makes it perfect for a summer garden.

REBel

REBel

REBel is a combination of the double ecobacking Royal Grass® has been using since 2011 with an additional stability matrix and a transparent coating. This makes it easier to lay and its unique composition improves recyclability. Royal Grass® setting the new standard by continuing to develop its green ecobacking into REBel.

ROYAL GRASS® COLLECTION

We manufacture artificial grass that really looks like natural grass. From lush grass that looks like it is just about ready to be mowed, to beautifully short cut grass. From grass that looks like it has been in the hot summer sun, to grass that simply looks fresh and green.

EXTREMELY STRONG

Royal Grass® is artificial grass of premium quality made with only the best raw materials. It is incredibly resilient and durable.

You can let your dogs run around and enjoy their lawn too! Royal grass® doesn't turn into a muddy mess and don't worry doggy droppings won't damage our grass. At Royal Grass® our products are designed for the whole family to enjoy.

100% SAFE

Royal Grass® artificial grass has been tested according to the EN71-3 standard. This European standard is known to be one of the most stringent standards for safety

This standard of testing is used to test toy products, we ensure your safety is our priority.

A RESPONSIBLE CHOICE

Everyone is responsible for the environment. We have accepted ours.

SUSTAINABLE GREENERY

Artificial grass no substitute for the real thing? Nothing could be less true. Experience the convenience and enjoyment derived from sustainable artificial grass with an authentically natural look and feel. Help us unleash a green revolution. We make gardens around the globe greener and people happier, blade by blade.

Green energy

This is why our manufacturing facility is equipped with solar panels. It is also ISO 9001 and 14001 certified. This means we adhere to the most stringent European environmental and quality requirements.

Raw materials

We only source the most high-quality, safe raw materials possible. We do so to guarantee the very best quality so the grass has a very long lifespan. The longer it lasts, the more sustainable it is. Moreover, this quality enables us to properly recycle the grass. In this way, we create the best sustainable products for today and the future.

Drainage and maintenance

Our grass doesn't need to be mowed, fertilised or watered. This leaves you with more time, money and water. Is it raining too much? Then the water flows right through your turf into the soil. Just like it would with natural grass. This keeps the excess water away from the rest of your garden and your patio. Isn't that ideal?

A SIGNIFICANT STEP

Once your Royal Grass® artificial grass needs replacing, you can have it recycled in the Netherlands and Belgium using our Take Back Program. This is because we have several Royal Grass® collection points in the Netherlands and Belgium, where we collect obsolete Royal Grass® artificial grass and cutting waste for recycling. So far we are the only supplier of artificial grass with this program, although we hope that others will soon follow. We feel we owe it to the world and to the future.

By the way, recycling Royal Grass® artificial grass is included in the price. All you have to do is tell your nearest Royal Grass® dealer that you want to have the grass recycled when your Royal Grass® lawn needs replacing
